I am running the part for "Package Development" from rap4mads and I have problems with it although I did not have them when I was running in the class.

Problem1:

When I make the function in the "Build" tab I am not install my package due to the error below:

Problem2:

When I make a repository on Github and I want to connect my project to it I have this error:

"git@github.com: Permission denied (publickey).

fatal: Could not read from remote repository.

Please make sure you have the correct access rights

and the repository exists."

I have this problem only for making new packages although for making projects and rmd files I did not have this problem.

(I checked the box of creating a repository while making the package, and I also tried creating a new ssh key and add it to git, but still it does not work.)
